

WEEKLY CYBER THREAT INTELLIGENCE

BeeSINT Threat Report

Automated pipeline tracking critical CVEs, actively exploited vulnerabilities, active C2 infrastructure and malicious URLs — every week, without manual intervention.

01 June 2026 - 08 June 2026

Executive Summary

A plain-language recap of this week's findings — no cyber background required.

This week, the pipeline tracked 2 new critical CVEs. 1 was added to CISA's Known Exploited Vulnerabilities catalog, including at least one tied to known ransomware activity. 1 command-and-control server(s) remain active and 2 malicious URLs were seen online in the monitored feeds.

Executive Deep-Dive

A closer look at this week's most decision-relevant figures — remediation speed, urgent exposure, and the two threats gaining the most ground.

Source Status

Confirms which upstream intelligence feeds responded this run — a resilient pipeline degrades gracefully rather than failing silently.

New Critical CVEs

Newly disclosed vulnerabilities rated 9.0+ severity — the ones attackers move fastest to weaponize.

2 CRITICAL THIS WEEK	+12.5% TREND VS PREVIOUS RUN	5 HIGH SEVERITY VOLUME
-------------------------	---------------------------------	---------------------------

CVE	DESCRIPTION	CVSS	EPSS	PUBLISHED	VENDOR	LINK
CVE-2026-1	Example remote code execution vulnerability.	9.8	0.94	02 Jun 2026	acme	NVD →

Top Vendors

Software vendors/products named most often across this week's critical CVEs.

acme 2

CISA KEV Additions

Vulnerabilities CISA has confirmed are being actively exploited in the wild — the highest-priority patching list that exists.

1 NEW KEV ENTRIES	N/A TREND VS PREVIOUS RUN	0 DUE WITHIN 7 DAYS	RANSOMWARE ACTIVITY URGENCY
----------------------	------------------------------	------------------------	--------------------------------

CVE	VENDOR / PROJECT	PRODUCT	ADDED	EPSS	RANSOMWARE	LINK
CVE-2026-1	Acme	Widget	03 Jun 2026	0.94	KNOWN	NVD →

Mean-Time-to-KEV

Average days between a vulnerability's public disclosure and its confirmed active exploitation — shorter means less warning time for defenders.

REMEDATION SNAPSHOT			
4.5 AVERAGE (DAYS)	3.0 MEDIAN (DAYS)	1 SAMPLE SIZE	14.0 CISA REMEDIATION WINDOW (AVG DAYS)

Critical vulnerabilities took an average of 4.5 days to go from public disclosure to confirmed active exploitation this run — CISA's own remediation deadline for this week's KEV additions currently averages 14.0 days.

Malicious URLs Online

Live links currently hosting malware or phishing pages — still reachable by a victim clicking today.
